### Graduate Research in Stellar Astrophysics

*Advisor: Professor Sarbani Basu*

August 2020 - present

*Yale University*

- Using asteroseismic data and modelling techniques to investigate interior mixing and angular momentum processes in evolved solar-type oscillators.
- Answering stellar evolution questions using subgiant star asteroseismology
- Investigating stellar flares and solar flare in *TESS*, *Kepler*, and Solar Dynamics Observatory (SDO) data with machine learning. Advising Yale University Junior Daniel Chang.

*Advisor: Professor Edward Rhodes*

August 2016 - present

*University of Southern California*

- Processed solar oscillation data from SDO and the Solar and Heliospheric Observatory (SOHO) satellites in order to examine solar atmospheric properties across multiple solar cycles.
- Took helioseismic data at the Mount Wilson Observatory 60' solar tower as part of the Birmingham Solar Oscillations Network (BiSON) group.
- Supported NASA's JUNO mission with CH<sub>4</sub> imagery data taken with the Mount Wilson 100" telescope.
